

COURSE CODE: BCSE203E
WEB PROGRAMMING - PROJECT
TITLE: DINE DIGITAL

ABSTRACT

The project, Dine Digital Website Using HTML, CSS, and JavaScript, aims to create an engaging and user-friendly platform for showcasing a restaurant's offerings, ambiance, and services. The website will provide essential features such as an interactive menu, online table reservations, contact information, and customer feedback. The front-end will be developed using HTML for structure, CSS for styling, and JavaScript for interactivity and functionality. The website will feature a responsive design to ensure seamless usability across various devices and screen sizes. The menu section will display dishes with descriptions, prices, and appealing visuals, while the reservation form will validate inputs and notify users of successful bookings. Additionally, the site will include a dynamic gallery and customer testimonials to enhance the restaurant's online presence. This project demonstrates proficiency in web development technologies and provides a foundation for further enhancements such as integration with backend systems for real-time updates and payment processing.
